

[SYSTEM_PROFILE]: JAMES B. POWELL

ROLE: SENIOR SOFTWARE ENGINEER LOC: NEW ORLEANS, LA | WEB: LINKEDIN.COM/IN/JAMES-B-POWELL |
MAIL: JAMES.POWELL@ALUMNI.LSU.EDU | TEL: 985-774-5971

// 01_SYSTEM_ARCHITECTURE (SKILLS)

CORE STACK	INFRASTRUCTURE (AZURE)	DATA & SECURITY
.NET 8 / C#	Functions / App Service / WebJobs	SQL Server / Table / Blob Storage
Java (Spring Boot)	Service Bus / SignalR / APIM	Entra ID / B2C / Private Endpoints
Angular / TypeScript	Front Door / Firewall / VPN Gateway	Docker / Azure DevOps / Pipelines
SuiteScript	Application Insights / Log Analytics	Bicep / Microservices / Event-Driven

// 02_EXECUTION_LOG (EXPERIENCE)

RAISTONE CAPITAL [FINTECH]

IMPACT: *Slash customer acquisition costs via award-winning embedded integrations (SAP Pinnacle Award Finalist). Engineered a 10x increase in operational throughput capacity. High-volume individual contributor, authoring ~30% of the total codebase within a 12-engineer team.*

ARCHITECTURAL RETROSPECTIVE: *Architected and deployed a greenfield Event-Driven Microservices ecosystem on Azure to power high-volume fintech operations. The system leverages a decoupled, serverless-first approach to ensure high availability and precision during peak financial processing windows.*

- FRAMEWORKS** Developed the core backend application using **.NET 8**, exposing a **RESTful API** to communicate with modern **Angular** SPA client portals and core processing UIs.
- DATA** Deployed **Azure SQL Server** for core data storage and utilized **LLBLGen** as a pre-compiled type-safe ORM. Leveraged **Azure Table Storage** for high-performance non-relational needs including ingestion hash deduplication, distributed token caching, and real-time execution logging.
- SERVERLESS** Utilized **Azure Functions** and **WebJobs** to handle high-volume ingress/egress and Salesforce synchronization with auto-scaling capabilities.
- MESSAGING** Implemented **Azure Service Bus** and **SignalR** to facilitate decoupled microservice communication and real-time user notifications. Designed **Claim-Check** patterns using **Azure Blob Storage** to efficiently process large file payloads across the distributed system.
- CONFIGURATION** Used **Azure App Configuration** to manage feature flags and centralized configuration, and implemented **Azure Key Vault** for secure credential storage.

- **SECURITY** Secured the ecosystem using **Azure Entra ID** for internal SSO and **Azure B2C** for external partner authentication.
- **NETWORKING** Deployed **Azure Front Door** and **Private Endpoints** network isolation, and **Azure API Management** to provide a professional developer-friendly API management and documentation portal.
- **MONITORING** Utilized **Application Insights** for deep log telemetry analysis and configured **Azure Alerts** to trigger automated production support tickets in Jira for critical issues.
- **DEVOPS** Established robust CI/CD pipelines with **Azure Pipelines** and **Bicep** for reproducible Infrastructure as Code deployments.
- **LEADERSHIP** Led Agile ceremonies and streamlined delivery by pre-proofing technical requirements with data modeling/ERDs. Unblocked engineers and offshore teams by clarifying requirements, providing technical mentorship, and serving as the primary technical liaison to ensure code quality and project velocity. Conducted regular one-on-one engineer check-ins, provided performance review consultancy, and organized knowledge-sharing sessions and huddles to foster team growth.

Senior Developer - Lead - Partner Integrations | Feb 2025 – Jan 2026

MISSION: *Leading end-to-end development of the NetSuite Capital SuiteApp and backend integrations to enable seamless invoice financing.*

- **PLATFORM** Led design and implementation of a scalable backend integration platform built on **.NET 8** and **Azure Functions**, enabling secure, high-volume invoice financing workflows between NetSuite and Raistone.
- **ARCHITECTURE** Architected and owned the serverless integration layer responsible for orchestration, validation, and lifecycle management of financing transactions initiated from the **NetSuite Capital SuiteApp**.
- **AUTOMATION** Designed and implemented event-driven accounting automation to synchronize invoices, payments, and deposits, ensuring accurate reconciliation across distributed financial systems.
- **LEADERSHIP** Served as technical lead for the **NetSuite Capital SuiteApp**, aligning **SuiteScript** and **REST** integrations with backend services and enforcing integration contracts and data integrity.

Senior Developer - Lead - Core Processing Engine | Oct 2022 – Feb 2025

MISSION: *End-to-end development of the Core Processing Engine—a bespoke, ledger-based trade finance accounting workflow tool.*

- **FULL_STACK** Led end-to-end development of a **.NET 8 Azure Application Service** powering a bespoke, ledger-based trade finance accounting engine, with an **Angular** UI backed by a **RESTful API**.
- **AUTOMATION** Architected and implemented the core automation and processing logic to drastically reduce operational costs, decoupling trade volume growth from manual operations.
- **LEDGER** Designed a custom **immutable ledger system** to ensure accurate, auditable financial tracking across high-volume trade finance workflows.
- **REAL_TIME** Implemented real-time system feedback and state propagation using **Azure SignalR**, enabling responsive UI updates during peak processing and settlement windows.

Senior Developer | June 2020 – Oct 2022

MISSION: *Realized a greenfield Azure .NET infrastructure build-out to support the custom software needs of a growing trade finance Fintech.*

- **GREENFIELD** Architected the initial **Azure .NET** infrastructure from the ground up, establishing the foundation for all subsequent trade finance custom software.
- **INTEGRATION** Built automated partner integrations (**SAP Ariba, C2FO, NetSuite**) to drive lead generation and document gathering, directly decreasing new customer acquisition costs.
- **RECOGNITION** Technical lead for the SAP Ariba integration project, recognized as an **SAP Pinnacle Awards Finalist**.

GENERAL ELECTRIC (GE DIGITAL) [INDUSTRIAL_IOT] Software Engineer | Nov 2016 – June 2020

MISSION: *Modernizing GE Power equipment tracking by building a temporal asset-attribute management tool to enable predictive maintenance.*

- **FRAMEWORKS** Developed the core platform using **Spring Framework**, utilizing **Spring Security** for RBAC and **Spring Data** for efficient persistence in a secure industrial environment.
- **REACTIVE** Leveraged **RxJava** for extensive **Reactive Programming**, enabling highly responsive handling of asynchronous data streams and complex event propagation.
- **DATA** Architected the data layer to ingest and serve critical equipment data from **Oracle DB** and **Teradata**, ensuring high fidelity for predictive maintenance models.
- **MODERNIZATION** Replaced legacy tracking methods with a centralized **Java/Kotlin** and **Angular** platform, visualizing complex power generation asset hierarchies efficiently.

ANALYTIC STRATEGIES [DEFENSE] Software Test Automation Engineer | May 2016 – Nov 2016

MISSION: *Modernization of US Navy software systems via automated quality assurance.*

- **AUTOMATION** Developed automated functional tests using **Java, JUnit, and Selenium** in a secure SCRUM environment.

JACOBS ENGINEERING GROUP [ENERGY] Project Engineer | Sept 2011 – April 2015

MISSION: *Lead engineering for major subsea tie-back projects and offshore rig installations.*

- **LEADERSHIP** Mechanical engineering lead for blast wall installation projects on large offshore oil rigs.
- **MANAGEMENT** Coordinated multiple engineering roles for subsea infrastructure projects.
